

Competition FACS. A) Raji cells were incubated with 0.2  $\mu\text{g/ml}$  S2C6-PE, shown in the unshaded histogram outlined by the solid line. Unlabeled Raji cells are shown in the unshaded histogram with the dashed line to show the background fluorescence signal. The shaded histograms show competition of S2C6-PE by B) 10  $\mu\text{g/ml}$  non-binding control antibody, C) 10  $\mu\text{g/ml}$  murine S2C6, or D) 10  $\mu\text{g/ml}$  cS2C6. The unshaded histogram in B-D is the S2C6-PE without competitor, for reference.
